FROM: George J. Tomchick *gm* William A. Luster
Environmental Protection Spec. & Air Pollution Control Engr.

On April 14, 1977 a meeting was held with Mr. Kenneth Gibson, President, and representatives from a company which is attempting to sell air pollution control equipment to Mr. Gibson.

A company official discussed their proposal for control and also discussed its applicability to the plan approval application. The operation of the furnaces was observed and various cycles were timed and various problems that may occur with proposed air control system were analyzed. Company stated that after observation of operating conditions, they believed that their system could control emissions.

Applications will be completed and one furnace will be equipped to determine how effective the new system will be in reducing both visible and mass emissions. Department will be notified of progress.
